

Mobile Climbing Wall

The Mobile Climbing Wall can be used both indoors or outdoors but it needs a minimum of 8m height clearance (11m for power lines) to be set up. It can be set on grass or concrete providing it is both flat and level. Please also note the size of access doors need to be 3.2m high and 2.5m wide. The wall is 3.2m high when travelling so any low bridges or barriers must be greater than this height or be removable. The wall is 2.3m wide when travelling so any gates or entrances need to be at least this wide. Please note that if we have to turn into or out of an entrance the width needs to be considerably greater to accommodate the trailer 'swinging out' as we turn. If you are in any doubt, please call us.

The diagram shows our typical and preferred setup. It is possible to reduce this size by limiting the number of climbers we allow at any one time. If space is tight, please call us to discuss the options.
